

Outer Cushion Cover & Surfaces

- EHPET utilizes three primary substrate covers for all furniture products:
 - Plush fabric – Soft, long hair, polyester, micro-velvet blend.
 - Faux suede-like fabric – SHORT, micro-fiber composition.
 - Faux leather-like fabric – EASY clean, semi-polyurethane material.
- All cushion covers are furniture grade quality for long lasting durability.
- Removable cushion covers have been tested to be spot cleaned or machine washable, using cold water and delicate, low heat dry.
- Polyurethane covers have been tested and are within the safe standards as required for Phthalates
- All wood and other surfaces have been tested and are lead free.

Inner Cushion Cover

- The inner cushion cover is a heavy weight, non-woven polyester blend with a built-in pocket for use with our exclusive SNOOzZzONE™ Pet Comfort System.
- For long lasting durability and to prevent soiling, we recommend covering the inner cushion with a SNOOzZzONE™

Cushions, Foam & Fill

- Our SNOOzZzONE™ cushions are filled primarily of milled foam.
- The minimum fill weight is 11oz of high loft milled foam.
- Specially selected from our exclusive factory, milled foam has proven to be more durable and longer lasting than poly fill.
- Where poly filled beds require baffles to secure the fill in place, our high loft mill foam won't stray or separate after extended use.

Closures

- Enchanted Home Pet uses YKK zippers on all SNOOzZzONE™ cushions for snag-free and long lasting performance.

Furniture Foundation

- All our furniture products use furniture grade construction methods.
- Choice hard and soft woods provide a long lasting durable frame foundation.

Testing and Compliance

- EHPET employs stringent testing standards as recommended by our testing facility.

- All our materials are tested to meet or exceed U.S and the more stringent California Proposition 65 Standards.
- Polyurethane covers have been tested to be within the safe standards as required for Phthalates (DBP, DINP, BBP, DEHP, DNOP, DIDP, DnHP).
- All surfaces have been tested to be lead free.
- EHPET memory foam is Made in the USA and is tested Tris free.
- The gel-core formulation is polyurethane based and has been tested to be non-toxic, lead free and free of heavy metals.
- All plywood and glued wood have been tested to meet California Proposition 65 Standard 93120 and are compliant for formaldehyde phase II requirements.
- All our foam and fill has been tested for compliance standards of California Proposition 65 which requires adherence to CA Technical Bulletin No. 117:2000 Section A Part I and Section D Part II for fire retardant performance and confirmation that the foam is free of Tris (1,-dichloro-2-propyl) phosphate (TDCPP).
