

Administration as a supplement for horses:

Initial 2-4 weeks		Long-Term Administration
Under 600 lbs	1 scoop daily	½ scoop daily
600-1200 lbs	2 scoops daily	1 scoop daily

This chart should be used for guidance. Initial administration period is 2-4 weeks at 1 to 2 scoops per day depending on weight, or as recommended by your veterinarian. For horses over 1200 lbs administration may be increased. Cosequin ASU PLUS can be administered either at one feeding, or divided between feedings. Once response is noted, the number of scoops can gradually be reduced to a level that best maintains your horse. Prior to and during an event or strenuous exercise, administration may be increased back to the initial level for extra support.
