

Please read the section below this chart for detailed information on selecting the proper SMB-3 boot for your horse.

SMB-3™ SIZE CHART

It is important to choose the correct size for your horse to get the optimum benefits from the SMB-3. In the chart below there are circumference and height measurements. The circumference measurement of the boot is more critical than the height because the boot must fit around the horse's leg and overlap 1/2" to 1 1/2" to be effective. When sizing, the height of the horse and the coarseness of the bone should be taken into account, but these should not be the only determining factors.

SMB-3s are sized in small, medium and large. To choose the correct size, view the chart. If you are still unsure which size to get, you should measure the circumference of your horse's front and rear fetlocks at the widest point (see picture). Then choose the boot size that is the next bigger size than your measurement. Example: If your horse's fetlock measures 11" in the front and 12" in the rear, you should choose SMB-3 in a medium for both the front and rear. For other fitting questions, please call Professional's Choice Customer Service directly at 800-331-9421, Monday – Friday, 7 A.M. – 4 P.M. Pacific Standard Time, or e-mail any time at info@profchoice.com.
