BITLESS BRIDLE

INSTRUCTIONS

1. Snap reins to HEADSTALL curb rings – A (they come attached to rein ends of curb – B). This enables you to more easily spread the noseband open to slip over the horse's muzzle.

2. Spread the noseband open with your hand.

3. Hold crown piece – C (top of bridle) and open noseband. Slide the noseband up to proper position while easing the crown piece over horse's ears. Make sure that curb and throat latch are under the horse's head. This is a traditional bridling method but with the softness of the rope, it just requires the extra hand to hold the noseband open.

4. Once the Bitless bridle is on the horse, adjust throat latch. Unsnap reins from HEADSTALL curb rings – A and snap to rein ends – B. Do this one snap at a time to insure horse is under control.
