

Fiberfill colored for demonstration purposes only.

We cut the outer waterproof layer of a Rambo® Supreme with Vari-Layer Turnout to give you a look at the technology underneath.

Standard Turnout Blanket

Heat loss indicated over back & hips.

Vari-Layer® Blanket

No heat loss. Heat trapped under Vari-Layer.

WHY IS THIS GOOD FOR ME AND MY HORSE?

- For the owner, it means less physical weight to lift onto your horse's back. This also means your horse is carrying less weight.
- For horses that struggle with holding condition or older horses this can be an invaluable tool to aid in keeping them warm and cozy, even on the coldest of nights.
- By layering the fiber on the sides, the blanket can sit closer on the horse's body, trapping the warm air and allowing greater belly coverage underneath.
- Our super breathable Aquatrans® technology used in our turnouts ensures that any moisture is released to the outer, keeping the horse comfortable.

MORE WARMTH WITH LESS WEIGHT

WHAT IS VARI-LAYER TECHNOLOGY?

- Vari-Layer is the layering of thermobonded fiberfill to gain maximum heat retention without the heaviness of a standard fill - more warmth with less weight
- Thermobonded fiberfill used in this system retains its loft over time even through washing which in turn helps your blanket maintain optimal heat retention

"I use the Vari-Layer blankets and turnout blankets as it keeps my horses at optimum temperature and avoids excess weight on their backs. The Vari-Layer range are great quality products I can always rely upon."
