

Equi-Jec® 5

Influenza, Herpesvirus, Eastern & Western Encephalomyelitis Killed Virus Vaccine, Tetanus Toxoid

Description

Equi-Jec® 5 is an equine Influenza, Herpesvirus, Eastern, Western Encephalomyelitis, Tetanus vaccine.

Features

- Protects against 5 diseases in 1 vaccine
- Safe for pregnant mares
- Safe for horses as young as 4 months of age
- Protects against Influenza and Herpesvirus types 1 and 4

Benefits

- Fewer needle sticks mean less pain for horses
- Single dose pre-filled syringe

Advantages

Equi-Jec® 5 protects against Sleeping Sickness, Influenza, Herpesvirus (Rhino) and Tetanus in one vaccine.

Dosage & Administration

Shake well before use. Using aseptic technique, administer to horses intramuscularly with a 1 mL dose. Administer a second 1 mL dose intramuscularly in 3-4 weeks using a different injection site. Revaccinate annually and prior to anticipated exposure with a single 1 mL intramuscular dose. Consultation with a veterinarian is recommended.

Precautions

Store at 35-46° F (2-8° C). Protect from freezing. Do not vaccinate within 21 days before slaughter. Do not mix with other products.

Antidote: Epinephrine

Highlights

- Protects horses against 5 diseases in 1 vaccine
- Safe for pregnant mares
- Safe for horses as young as 4 months of age

Uses

For vaccination of healthy horses 4 months of age or older as an aid in the prevention of disease caused by Eastern and Western Encephalomyelitis and Tetanus; as an aid in the reduction of respiratory disease caused by Equine Influenza Virus (EIV) (product contains Kentucky lineage (KY/95), Florida sublineage clade 1 (OH/03), and Eurasian NewMarket/2/93 (NM 2/93) EIV strains), and equine Herpesvirus type 1 (EHV-1) and type 4 (EHV-4.) Safe for use in pregnant mares.

Warning

This product has been tested under laboratory conditions and shown to meet all Federal standards for safety and efficacy in normal, healthy, immunocompetent animals. This level of performance may be affected by conditions such as stress, weather, nutrition, disease, parasitism, other treatments, individual idiosyncrasies, or impaired immunological competency. These factors should be considered by the user when evaluating product performance or freedom from reactions.
