

**CHARLES
OWEN**

◆ ESTABLISHED 1911 ◆

Charles Owen's helmet range caters for every head shape. Here are the key steps to ensure a helmet is correctly fitted. We advise riders to always have their helmets fitted professionally.

5 STEPS TO FIT

1 MEASURE

Measure from $\frac{3}{4}$ inch above the eyebrows and around the bump at the back of the head.

2 CHECK SIZING

Use the size chart to convert the head circumference (cm) to a helmet size.

3 GET THE LOCK

- ◆ Hair should ideally be worn in a low pony tail for first fit*
- ◆ Place the forehead into the front of the helmet then, using a rolling motion, push backwards to feel the helmet lock into the base of the skull
- ◆ Run a finger around the rim of the helmet to check for gaps or loose points
- ◆ If there is any movement or gaps you may need to try a different size or round fit

4 SECURE

Always adjust the chin strap first, then tie the back laces with a knot and a bow (if applicable). You should be able to put a finger between the strap and chin.

5 CHECK FIT

A new helmet will mould to the shape of the head as it is worn. Check for:

- ◆ A snug fit with even, firm pressure around the entire head
- ◆ Helmet locks onto the back of the skull
- ◆ With the harness unfastened, helmet should not rock forwards nor backwards
- ◆ No specific pressure points
- ◆ No gaps

*If the rider would like to wear their hair up inside the helmet for each ride, firstly find the right size with hair in a low pony tail to assess size then put hair up to assess if a bigger size is needed.
